

500w solar panel service life

Overview

You can generally expect a high-quality 500W solar panel to have a productive lifespan of 25 to 30 years, and often longer. This isn't a hard expiration date; it means the panel will still be producing a significant amount of electricity—typically around 80-90% of its original. The best solar panels are built for the long haul. Most are backed by 25- to 30-year performance warranties, and in real-world conditions, many keep producing power well beyond that. 25% degradation rates cost 10-20% more upfront, they produce 11.5% more electricity over 25 years compared to standard panels, often justifying the higher initial investment through extended productive life and better. Solar panels are built to last, but just how long can you expect them to keep powering your home?

The average lifespan of a solar panel is 25-30 years, meaning your investment in clean energy will pay dividends for decades. Clicking “Get Your Estimate” submits your data to All Star Pros, which will process your data in accordance with the All Star Pros Privacy Policy.
