

# Application of double glass components on curtain walls

## Overview

---

Double glazing involves two layers of glass separated by an air gap. This design improves insulation, reduces heat loss, and enhances soundproofing. It is ideal for varying climates and is often the standard in modern buildings. Glass curtain walls are lightweight aluminum-framed facades housing glass panels. Here's what makes them stand out: Non-load-bearing —pure aesthetic and performance. Protects the building envelope. This article will explore the features, benefits, design considerations, and installation process of double glass curtain walls. These panels, which can be made of glass or other materials, are fixed into frames—commonly aluminum—to create exterior walls that are both visually appealing and structurally. Curtain wall systems are non-structural systems for the external walls of buildings.
