

Base station dedicated power supply equipment includes

Overview

Low profile power supply design usually includes printed circuit board (planar) power transformers and output inductors and surface mount input and output capacitors. The cabinet houses critical components like main base station equipment, transmission equipment, power supply systems, and battery banks. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. A power efficient. A single RoHS compliant BGA package integrates a switching controller, power switches, an inductor, and all the supporting components. The EverExceed base station system is equipped with an AC and DC system, which consists of an AC distribution box/panel, a -48V high-frequency switch. To understand how, consider the power amplifier (PA) and power supply unit (PSU) in the 5G New Radio (NR) gNodeB base station. In 2G, 3G and 4G, the PA and PSU were separate components, each with its own heatsink.
