

# Battery solar energy storage cabinet system in finland

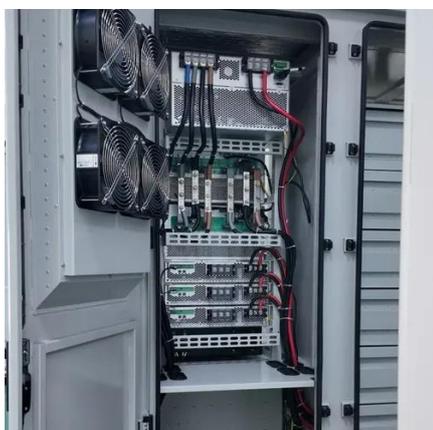

## Overview

---

In Finland, three-meter-tall containers have appeared quietly in forests, fields, and along highways, looking unassuming but packed with technology. As independent company we design energy storage systems in close co-operation with our customers so that they meet the customer expectations and needs. We offer standardised and tailored solutions both for indoor and outdoor applications. These rugged, weather-resistant cabinets offer exceptional performance in various environmental conditions at a medium-sized Finnish city all year round. A seasonal thermal energy storage will be built in Vantaa, which is Finland's fourth largest city. Costs range from €450–€650 per kWh for lithium-ion systems.
