

Do I need to drill holes when installing photovoltaic panels on the roof

Overview

The process of installing solar panels involves drilling holes in your roof to mount the panels in place. The good news is the modern flash feet are very unlikely to leak ever and many have warranties when installed by professionals. If not done correctly, water can seep in through these holes, causing leaks and long-term damage. Structural Integrity: A compromised roof can affect the stability of the entire. Homeowners considering solar energy often ask whether either installation will put holes in their roof, as most traditional solar panel mounting systems do require some roof penetration to secure the panels properly.
