

Do Siberians generate electricity from solar energy

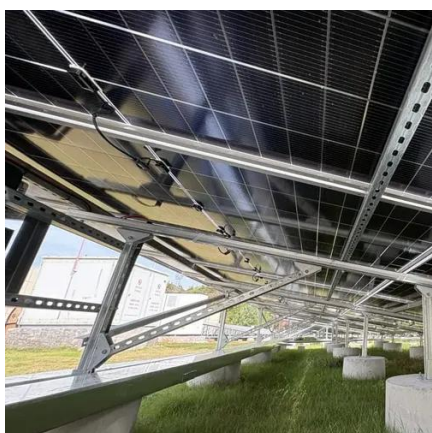

Overview

More than 75% of electricity in Yenisei, Siberia, is produced by hydroelectric power plants that do not pollute the atmosphere. The creation of an economical power plant that converts solar energy into useful (thermal and electrical) energy will solve the problems of energy supply in the vast territory of Siberia, and will reduce losses in agriculture [4]. To increase efficiency and economy, including the advisability of. While in some countries—leaders in energy transition (the EU, China)—the growth of investments in solar, wind, and hydropower production is taking place systematically within the framework of an increasing number of national and international strategies and programs, in the Russian Federation there. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation.
