

Drilling holes in the frame of photovoltaic panels

Overview

These mounting holes are typically located in the frame on the back or sides of the panel, not on the glass or the back sheet itself. By utilizing these pre-drilled holes, the installation system can safely anchor the solar panels without damaging the internal components. I'm retro-fitting and think it would be a far quicker and more secure to. I would like to drill through the frame of a Panasonic solar panel, red x, in 4 places. It would make my tilting mount idea simpler. The presence of these holes allows installers to easily position the panels.
