

# Electricity generation cambodia

## Overview

---

As of the end of 2024, Cambodia's total electricity generation capacity had reached 5,044 megawatts (MW), an increase from 4,649 MW in 2023. Another important form of transformation is the generation of electricity. Thermal power plants generate electricity by harnessing the heat of burning fuels or nuclear reactions - during which up to half of their energy content is lost. The Government of Cambodia set a goal of electrifying all villages by 2020 and connecting at least 90 percent of all households to grid-quality electricity by 2030. Fossil fuels, primarily coal, make up more than 40% of Cambodia's electricity sources, indicating a. Energy in Cambodia covers the energy sources used in the country including nuclear, fossil fuels, traditional fuels, and hydro-power. The whole plan horizon: AAGR ~ 9% without EE. 2\$/kWh, yet it would start to go up.
