

Find out the solar panels with weak power generation

Overview

The good news is that low solar output is usually explainable, and many causes are easy to fix. In this guide, we'll break down the eight most common reasons for low solar power generation. You'll learn what each issue looks like in real life and what to do next to restore. Solar panels offer an excellent return on investment, and the savings you can expect over their 25- to 30-year service lives are much higher than their upfront costs. Environmental factors cause 70% of solar production issues: Weather, shading, and dirt accumulation are the most common culprits behind reduced solar output, making regular monitoring and maintenance essential for optimal performance. So when your solar monitoring app shows lower numbers than expected, it can feel confusing or even alarming. Something has decreased slightly. Low production is a fixable problem in most cases.
