

Fixed type of folding container for oil refineries

LiFePO₄ Battery, safety

Wide temperature: -20~55°C

Modular design, easy to expand

The heating function is optional

Intelligent BMS

Cycle Life: ≥ 6000

Warranty: 10 years

Overview

Fixed Roof Tanks are commonly used to store petroleum products at ambient pressure. These tanks have a permanent roof attached to the shell and are often selected for their simple design and suitability for stable, non-volatile substances. In the refining industry, oil storage tanks are indispensable for containing large volumes of flammable liquids within the oil supply chain. These units enable safe operation in production, transportation, distribution, and storage of strategic hydrocarbons. Below, we take a closer look at the different types of oil storage tanks.

Materials Used to Manufacture Oil Storage Tanks
Fixed roof tanks are useful for storing oil and hydrocarbons with vapour pressures that are equal or similar to atmospheric

pressure. The risk of vapour build-up isn't as high which eliminates the need for a floating roof tank. Roofs are either flat or conical. See more on petro-online oilindustry [PDF]
