This cheatsheet shows all electric vehicles sorted by range. Data is based on real-world values. * = data for upcoming cars and might be based on. Electric vehicle range — how far a car can travel on a single charge — is one of the automotive industry's most scrutinized and debated specifications. For many buyers, it is a key factor in deciding whether an EV is practical for their needs. Contemporary EVs generally have a range from 100 to 300 miles (160 to 480 kilometers) on one charge. Navigate the map to find a charger near your destination and filter the list to your preferred speed. If you see arrows in a column heading, click it to change. A plug-in hybrid runs on both gasoline and electricity, and can drive short distances on battery power before the engine takes over.
