

# Homemade solar power generation made of clay

## Overview

---

The clay used is a very fine aluminosilicate crystal known as zeolite 13X. It's a neat experiment, and with the Peltier underneath the metal container holding the clay, enough power is. Learn how to make an easy Solar System school project using clay and chart paper! ☐☐☐ Perfect for kids, students, and parents who need a simple and creative idea for science exhibitions, school assignments, or home learning. This work reviews the recent work of natural clays in the structure, classification, functionalization, and application in. Adding water to zeolite — a clay often used as a filter material — generates heat, and where there's heat, there can be electricity. [Robert] uses a salvaged Peltier device, as you find in small electric refrigerators. These solid-state heat pumps usually convert electricity into a temperature. Portable, weatherproof, and ready-to-rock — a homemade solar generator can meet all your power needs in and around your boat, camper, or cabin. There was only one hitch — the house was off the grid. From crafting a sun-tracking mechanism to optimizing heat absorption, each step offers valuable insights into the science of solar energy.

## Homemade solar power generation made of clay
