

How are photovoltaic panels transported to the roof

Overview

Instead, solar panels are set and secured into manufactured trays that are weighted down to the roof using ballast-blocks made of stone or concrete. Replacing an old roof before installation saves \$2,000-\$5,000 compared to removing and. Installing solar panels on your roof isn't just about securing them in place—it's also about getting them up there without breaking your back (or the panels). Furthermore, it's important to exercise extreme caution when handling, transporting, and lifting the solar panels onto the roof, to avoid potential. Solar panels are connected to your roof through a racking system. Lifting these substantial and often delicate panels to the rooftop is not a simple task.
