

How long is the wind-generating wing

Overview

Today, blades can be 351 feet, longer than the height of the Statue of Liberty, and produce 15,000 kW of power. Modern blades are made from carbon-fiber and can withstand more stress due to higher strength properties. Most new turbines have. Wind energy has undergone a massive transformation, represented by the colossal blades propelling turbines into the future of renewable power. This means that their total rotor diameter is longer than a football field. What's driving this growth?

Let's take a closer look.
