Overview

On average, a 2 kW solar panel system costs \$6,360, according to real-world quotes on the EnergySage Marketplace from 2025 data. Premium Technology Justifies Higher Costs: While SolarEdge systems cost 20-35% more than basic string inverters (\$5,500-\$9,000 vs \$3,000-\$5,000 for residential installations), the module-level optimization delivers 15-25% higher energy production, typically paying for the premium within 2-3 years. A 2kW solar system can generate 2 kilowatts of power under ideal conditions, typically comprising around 5-8 solar panels depending on the efficiency and wattage of the panels used. As of 2024, the average cost of a 2kW solar system in the United States ranges from \$4,000 to \$6,000 before. Small Residential Systems (3-5 kW): These systems typically use inverters ranging from 3 to 5 kW, with prices ranging from \$1,000 to \$2,000. But your actual price will depend on factors like your roof's complexity, local labor costs, the equipment you choose, and what incentives are available in your area. Expect to spend \$0.24 per watt on a solar inverter, not including labor costs.
