

How much does it cost to invest in Canadian energy storage power stations

Overview

Businesses often invest in 100–500 kWh systems, costing \$300–\$500 per kWh. Results show meaningful declines in costs across all jurisdictions in the medium-term (2025-2035), followed by stabilization or slight increases in most regions through to 2050 due to rising costs (for labour, transportation). Capital expenditures in Canada's energy sector totaled \$89 billion in 2024. Oil and gas extraction was the largest area of energy sector capital expenditure at \$43 billion in 2024, followed by electrical power generation and distribution (\$32 billion). Long-term operational and maintenance expenses. However, one crucial question remains: what does it really cost to build an energy storage power station, and what factors drive those costs?

This article takes a closer look at the construction cost structure of an energy storage system and the major elements that influence overall investment. Important insights into the competitiveness of renewables resources in Canada today and in the future. Approach Levelized Cost of Natural Gas is \$3. Fuel Cost Projections are from the IESO APO 2022.
