## Overview

---

Yes, you can run a solar generator 24/7—but only under the right conditions. Batteries are now cheap enough to unleash solar's full potential, getting as close as 97% of the way to delivering constant electricity supply 24 hours across 365 days cost-effectively in the sunniest places. <sup>2</sup> How close to 24/365 solar generation is optimal?

<sup>1</sup> kW of stable solar power across 24. Solar power seems like a limitless source of energy, but can you truly rely on a solar generator all the time?

In this informative read, you'll probe into the practicality and limitations of using a solar generator consistently. But can a solar generator really run all the time?

In this article, we will explore the capabilities of solar generators and uncover the factors that determine their continuous. In our new Ember “white paper”, we present modelling showing that solar with batteries in major sunny cities, such as Las Vegas or Mexico City, can now get more than 90% of the way to continuous generation, at costs below those of coal or nuclear power. This article delves into the mechanisms behind this capability, the current state of solar technology, and the implications for energy production and.
