

# Is it better to make an inverter off-grid or on-grid

## Overview

---

Choose an off-grid inverter if your customers live in a remote area, want energy independence, or need blackout protection. When choosing the right inverter for a solar energy system, it's essential to understand the fundamental differences between on-grid (grid-tied) and off-grid inverters. When building a solar power system, choosing the right type of inverter is one of the most important decisions. Hybrid inverters work with both your solar system and the grid, giving you more flexibility. If your solar panels produce more energy than you need, a hybrid inverter can send that extra. Understanding the off grid inverter vs on grid inverter debate is essential for businesses seeking to harness clean energy.
