

Italian Telecommunications Energy Storage Battery

Overview

The Italian transmission system operator, TERNA, successfully completed its first major auction for Battery Energy Storage Systems (BESS), a critical step to ensure grid stability as the country integrates more intermittent solar and wind power. According to Terna, Italy now has over 41GW of operational solar capacity, with around 4GW located in Puglia, and significant volumes also in Lazio and northern Italy, including almost 6GW in Lombardy. Puglia is also the leading region for wind generation, with approximately 4GW currently. Italy, which has always been a pioneer in renewable energy, continues to innovate with BESS (Battery Energy Storage Systems). Everyone's talking about batteries. Politicians, utilities. "The expectation is that by 2030 almost 20 billion euros will be invested in accumulation technologies in Italy, and we want to play a leading role in this transformation," says Julian Nebreda, CEO of Fluence-multinational active in 50 countries, 15 of which in Europe. Italy has both a rapidly growing utility-scale market as well as a flourishing customer-sited battery storage market. This development immediately de-risks the national.
