

Land policy for solar power generation projects

Overview

This report provides data and analysis of the land use associated with U. Across the 245 million acres of public land it manages, the BLM maintains more than 19 million acres as open for potential solar development, subject to a variance process. Solar energy development projects on BLM-managed public lands are authorized as rights-of-way under Title V of the Federal. Abstract—The rapid deployment of large numbers of utility-scale photovoltaic (PV) plants in the United States, combined with heightened expectations of future deployment, has raised concerns about land requirements and associated land-use impacts. Yet our understanding of the land requirements of. In a landmark accord, major solar developers, conservation groups, agricultural organizations, environmental and environmental justice groups, and tribal entities announced today their agreement to advance large-scale U. 6 GWac under construction as of August 2012 (SEIA 2012). Continued growth is anticipated owing to state renewable portfolio standards and decreasing system. elopment is large-scale solar photovoltaic (PV) plants.
