

Microgrid Environmental Tax

Overview

Federal and state programs reward microgrids that reduce emissions, support resilience, provide thermal efficiency, or improve grid stability. The Inflation Reduction Act of 2022 (“IRA”) makes several clean energy tax credits available to businesses. For electricity sold to an unrelated person and produced from the following renewable sources: wind, biomass, geothermal, solar, landfill and trash, hydropower, and marine and hydrokinetic. This page summarizes information in the Inflation Reduction Act related to renewable energy project tax provisions. Discover its key components, filing requirements, and significance. The Microgrid Tax Credit is an important financial incentive aimed at encouraging the deployment. Microgrids allow communities, businesses, and homeowners to generate and manage their own energy, offering increased reliability and independence from the primary electrical grid.
