

Microgrid Support Policy

Overview

As extreme weather and physical and cyber-attacks on grid infrastructure have led to outages of increased duration, scale, and impact on power customers and communities, policy and regulatory attention has shifted toward innovative investments to improve grid resilience. The reliability and resilience of the United States electric grid is a paramount concern for state and federal policymakers and regulators. The threat from natural disasters has grown in intensity and frequency. Microgrids, localized energy grids that can operate independently or in conjunction with the main power grid, are gaining traction as a solution for enhancing energy. This article is an update covering microgrid policies and implementation in the United States as of 2023. Landmark events such as the COP 28 conference and the passing of Biden's IRA have demonstrated how. Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate.
