

# Photovoltaic panel connected to OBD

## Overview

---

Hooking to the OBDII is fine, but keep in mind that connector port is not designed for constant plugging and unplugging to the port, and you cannot leave a solar charger connected while driving unless the charger is specifically designed for this. which the one you linked IS. Such devices are readily available commercially, of course, and generally consist of a small photovoltaic array that sits on the dashboard and a plug for the lighter socket. But as [Kerry] points out in the video below, most newer model cars no longer have lighter sockets that are wired to work. Could I connect to the ODB socket to trickle charge my car battery with a solar panel on my Toyota Prius 07, and how to?

Welcome to Motor Vehicle Maintenance & Repair! Are you talking about the 12v battery or the high voltage battery?

that's actually a good idea - some cars' cigarette lighter is. Trickle charge your vehicle's 12V battery with the Sunforce 4W Trickle Charger with OBD-II Connector. which the one you linked IS NOT. Alarms, immobilisers, and lock monitoring are examples of systems running in the background that can cause the battery to discharge even when the vehicle is not being used. Ideal for vehicles with lots of accessories and high parasitic loads. Powerful Performance: Pulse Technology reverses sulfate crystal buildup.
