

# Photovoltaic panels are not powered

## Overview

---

The most common cause of low power output in solar panels is obstructions or shadows on the array. Checking Voc (voltage open circuit) and Isc (current short circuit) measurements can help diagnose panel issues. Loose connectors and improperly seated terminals can cause low voltage or. Real-world performance expectations: Solar panels typically achieve only 75-85% of their rated capacity under normal conditions due to temperature effects, inverter losses, and varying weather patterns—this is completely normal and not a sign of system failure. But that doesn't mean you'll never run into an issue with your system. If the panels are broken or the inverter isn't working properly, call a pro to.
