

Photovoltaic panels that generate electricity directly

Overview

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Sunlight is composed of photons, or particles of solar energy. What actually happens inside a panel?

Why does sunlight create usable power?

And how does that electricity end up running your lights. Photovoltaics (PV) is the conversion of light into electricity using semiconducting materials that exhibit the photovoltaic effect, a phenomenon studied in physics, photochemistry, and electrochemistry. This energy can be used to generate electricity or be stored in batteries or thermal storage.

How Does Solar Work?

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. This energy can be used to generate electricity or be ...

How Solar Cell Works to Produce Electricity from Sunlight

Solar cells, also known as photovoltaic (PV) cells, are semiconductor devices that convert sunlight directly into electricity. This process is known as photovoltaic effect. Solar energy has now ...

How Is Solar Energy Converted Into Electricity?

Solar energy is converted into electricity through the photovoltaic effect, a process where sunlight, composed of photons, agitates electrons in a semiconductor material (like silicon) within ...

[How do solar panels work? Solar power explained](#)

At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect."

Photovoltaics and electricity

When the sun is shining, PV systems can generate electricity to directly power devices such as water pumps or supply electric power grids. PV systems can also charge a battery to provide ...

Solar PV Energy Factsheet
