

Prospects for small-scale solar power generation

Overview

We expect small-scale solar capacity across all three sectors will grow from 44 gigawatts (GW) in June 2023 to 55 GW by the end of 2024. • At the end of 2024, global CSP capacity reached approximately 7 GW ac, with virtually all installed CSP capacity (three projects, totaling 250 MW ac) located in China. Solar experienced the fastest growth among all power generation technologies in terms of electricity output, three times as much as wind power, which was ranked second. Compared to other sources of. The U. As of September 2025, deployment numbers are soaring to new highs, yet industry players also face challenges like policy uncertainty, financing hurdles, and supply. The small-scale power generation market is a dynamic and rapidly evolving sector within the energy industry.
