Overview

Cut labor costs as much as 40% with precision cut PV cable bundles for utility scale solar installations. Printed and striped cables reduce errors and ring outs, getting you paid faster. UPDATE Our bundled PV cables qualify as domestically sourced material for the Inflation Reduction Act. Learn More At Sun-Pull, we build. Every solar panel requires two DC wires. But photovoltaic (PV) wire transmits DC power, which means you need to run both positive and negative conductors for every panel. Without the right equipment, that can double. Wire Management Directly Impacts System Economics: Proper wire management reduces LCOE through decreased O&M costs, higher system availability, and extended component life. When you've got thousands of feet of PV wire strung up for seemingly endless acres, keeping them organized and protected is crucial. Depending on the project, solar EPCs have.
