

# Renovation of waste lithium batteries into energy storage

## System Topology

## Overview

---

Emerging battery recycling methods, particularly hydrometallurgical and direct recycling processes, are steering energy storage toward efficiency and sustainability. Lithium-ion batteries (LIBs) are widely used as power storage systems in electronic devices and electric vehicles (EVs). Recycling of spent LIBs is of utmost importance from various perspectives including recovery of valuable metals (mostly Co and Li) and mitigation of environmental pollution. For this purpose, the lithium-ion battery is one of the best known storage devices due to its properties such as high power and high energy density in. With the proliferation of electric vehicles (EVs) and electronics that rely on lithium-ion batteries (LIBs), it's become crucial to scale up battery recycling processes.
