

# Simple version of solar panels

## Overview

---

Solar panels use silicone or coated glass cells to capture sunlight and generate electricity. If you want to make a basic solar cell, all you'll need is a few household items, titanium dioxide, and conductive glass. Essentially, a solar kit is a bundle of all the basic components you need to get a small solar power system up and running. The big picture: You're ready to slash your electricity bills and boost your home's value but traditional solar installation seems overwhelming with its complex permits. Have you finally decided to build your home a DIY solar panel?

These DIY solar panel tutorials might finally help you get on with this project! This summer's extreme heat will definitely have you finally building a DIY Solar Panel. Well, you might as well put that sweltering heat to good use. Guy Gabay is a Solar Energy Contractor and the CEO of AmeriGreen Builders, a full-service solar energy, roofing, HVAC and window installation company based in the greater Los Angeles, California region. With over eight years of experience in the construction industry, Guy leads the AmeriGreen team. Solar energy can be simplified through various methods, focusing on efficient practices, accessible technologies, and affordable systems.
