

# Six rows of photovoltaic panels installed horizontally

## Overview

---

With the vertical orientation, you can install two rows of six solar panels because they fit in a compact area. Horizontal panels take up more space, so you'll most likely need to make three rows of four panels to get 12 on your roof. In residential and commercial photovoltaic projects, the orientation of PV modules is far more than a simple installation choice — it affects system efficiency, drainage performance, aesthetics, and maintenance requirements. As photovoltaic systems become more diverse and decentralised, rooftops. There are two ways of arranging solar modules in photovoltaic power stations, horizontal and vertical. The two most common orientations are: 1. Some things you need to consider include: There's no difference in the output solar panels produce regarding orientation.
