

Solar Powered De-Icing Fluid

Overview

This kit runs on solar power alone, providing aeration which agitates the water, keeping the surface from freezing over. There is no need for access to AC power, making this kit perfect for remote areas where grid power isn't available. This all-new RPS Cold Weather Aeration System keeps livestock tanks open during freeze-thaw cycles by circulating water to prevent ice buildup. The system automatically detects freezing temperatures and runs the air compressor at just the right times — keeping water accessible to animals without. This winter, save yourself time and hassle with this stock tank deicer. Price and other details may vary based on product size and color. Discover more about the small businesses partnering with Amazon and Amazon's commitment to empowering them. Learn more. Many years ago I spent some time selling a product that is no longer on the market. Put together by a company called Sacred Power, it was a small PV solar panel connected to an air pump which was designed to provide aeration in small ponds as well as de-icing for stock tanks where there is no power. Solar power liberates your water troughs from the grid, letting you place them exactly where your animals need them. This isn't about expensive, grid-tie solar arrays. There's a simple copper disk that stays chemical-free, a solar heater tucked in a protective cage, a quiet water circulator that keeps the bath moving, and a 500W submerged de-icer.
