

Solar on-site energy integrated outdoor energy storage

Overview

Replace energy from your local grid with cleaner power from integrated on-site solar and storage systems. Generate and store electricity to protect against outages, avoid price spikes, and maximize consumption value. Installing on-site renewable energy systems is a common strategy facility owners can use to save money, reduce their greenhouse gas emissions, and add resiliency to their facilities by generating their own electricity. We help give you more control over your energy costs by reducing or eliminating your dependence on the grid. In turn, you can manage costs, generate. Solar photovoltaic installations on the sites of ENGIE's customers, local authorities and businesses, are the response to such challenges. The Group designs, builds, operates, maintains and finances these solutions in more than 18 countries, supplying its customers with renewable energy produced on. Generate and store renewable energy with a solar and battery storage system at your facility to reduce energy costs, earn incentive payments, and improve corporate sustainability and resilience.
