

# Solar panels power generation effect on rainy days

## Overview

---

Yes, solar panels do work in the rain—just not at their full potential. Rainy or cloudy weather reduces the amount of sunlight hitting your solar panels. This, in turn, affects the energy output. While solar energy thrives in bright, sunny environments, that doesn't mean it. Residential solar panels are built for real life, not just picture-perfect, sunny days. We'll walk through how solar panels perform. We all know that solar panels use sunlight to generate electricity - but what happens during cloudy or rainy days?

The short answer is: as long as there's still sunlight filtering through, solar panels can still produce power during rain and cloudy weather. Solar panels generate electricity through photovoltaic (PV) cells made of semiconductor materials, usually silicon.

## Solar panels power generation effect on rainy days

### Solar power

Solar power, also known as solar electricity, is the conversion of energy from sunlight into electricity, either directly using photovoltaics (PV) or indirectly using concentrated solar power.
