Overview

Yes, solar panels work on cloudy days, but expect 10-60% efficiency compared to sunny conditions. Rain can help clean your panels, improving performance over time. Understanding how weather impacts your panels can help you set realistic expectations and take steps to maximise performance, even when the sun isn't shining at full. The short answer is yes, solar panels do work when it's cloudy, but they don't make as much power. If solar is a good. Even on overcast days, the atmosphere contains a significant amount of diffuse radiation, which is sufficient to maintain system generation. But the efficiency and power output may vary depending on cloud coverage, panel type, and system design.
