

# Solar power generation Molten salt power generation

## Overview

---

A molten salt solar tower is a renewable energy plant designed to capture solar energy and convert it into electricity. Completed the TES system modeling and two novel changes were recommended (1) use of molten salt as a HTF through the solar trough field, and (2) use the salt to not only create steam but also to preheat the condensed feed water for Rankine cycle. By using solar radiation to heat a. At the end of 2019 the worldwide power generation capacity from molten salt storage in concentrating solar power (CSP) plants was 21 GWhe. This article gives an overview of molten salt storage in CSP and new potential fields for decarbonization such as industrial processes, conventional power. Molten salt is a heat transfer fluid (HTF) and thermal energy storage (TES) used in solar power plants to increase efficiency and reduce costs. Novel Molten Salts Thermal Energy Storage for Concentr eat water and turn a gen tracted later using a secondary power cyc compared to traditional solar power systems.
