

# Solar rooftop power generation capacity

## Overview

---

According to our calculations, the average-sized roof can produce about 21,840 kilowatt-hours (kWh) of solar electricity annually—about double the average U. In a perfect world, the average roof in the U. But also, the world isn't perfect. Realistically, your roof's solar generation potential will be less than that. Rooftop potential is not equivalent to the economic or market potential for rooftop solar—it doesn't consider availability or cost. Furthermore, we will present empirical data, drawing on case studies to illustrate key points. Combined with the 30% federal tax credit extended through 2032, most homeowners can achieve payback periods of 6-12 years with 25+. Solar power, a renewable energy source, harnesses sunlight and converts it into electricity using photovoltaic cells. These cells generate direct current (DC) electricity which is then converted into alternating current (AC) electricity with the help of inverter technology.
