Spain wetlands: map, names and importance

In Spain we have a good amount of wetlands that, although they are now in danger because of the lack of water and climate change, house a large amount of biodiversity. In this ...

Tablas de Daimiel National Park

TDNP is one of the most important aquatic ecosystems of Spain and was probably the main inland wetland. It is important too because of the great amount of migratory birds that pass by the zone, like ...

[Biodiversity of inland saltscapes of the Iberian Peninsula](#)

Although a proper inventory of saltscapes is pending, the regional authorities in Spain have started to conduct their own wetland inventories (M. Bernués, pers. comm.), including saline wetlands.

[Hydrological modelling and evolution of lakes and playa-lakes in](#)

We perform a 22-years hydrological modelling of seven playa-lakes located in a semi-arid region of southern Spain, including dry and wet periods. To do that, we applied a hydrological ...

[Main aquatic and terrestrial ecosystems of Spain](#)

The high mountain ecosystems can be located in the Pyrenees, the Iberian system, the galaic massif, the central system and the Bético and Penibetic systems. In these areas, ...

[Pego-Oliva Wetland and La Safor Wetland location on the Spanish](#)

In this study, we compare La Safor Wetland with Pego-Oliva Wetland to analyze the effectiveness of local authorities' daily management in two coastal wetlands with similar evolution but

[Coastal Solar Power Is Revolutionizing Europe's Wetland Energy](#)

When installing solar infrastructure in coastal wetlands, preservation techniques play a crucial role in maintaining these delicate ecosystems. Leading European developers employ ...

[Urgent action needed to reverse ecological collapse of Doñana](#)

On World Wetlands Day, WWF presents a comprehensive review of scientific evidence on the current deterioration of Doñana - a World Heritage site and one of Europe's most important wetlands.

Tablas de Daimiel National Park

OverviewConservation issuesHistoryCharacteristicsBiological patrimony

In recent years demand for water for agriculture in the area surrounding the park has reduced the amount of wetland. Overexploitation of water resources has caused the water-table to drop. The key aquifer ("aquifer 23") has not been able to refill because of the overuse of water created by the "Badajoz (irrigation) Plan" started in 1952, and of the administrative apathy and lack of suppleness faced with cereal farmers lobbies. ...
