

State Grid Micro-Electricity

Overview

A microgrid is a small network of interconnected electricity components that can function independently from the utility grid when necessary, such as during an extreme weather event. Local electricity generation, battery storage, and generators feed power to the microgrid. Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate. Many State Energy Offices and Public Utility Commissions (PUCs) have been tasked by their governors and legislatures with translating this interest into action by designing programs, policies, rules, and regulations for microgrids. As a result, the National Association of State Energy Officials. Raleigh, NC - (July 23, 2025) The NC Clean Energy Technology Center (NCCETC) released its Q2 2025 edition of The 50 States of Grid Modernization.
