

# Successful report on wind power grid connection

## Overview

---

This report is available at no cost from the National Renewable Energy Laboratory (NREL) at [www.nrel.gov](http://www.nrel.gov). ABSTRACT Offshore wind is expected to be a major player in the global efforts toward decarbonization, leading to exceptional changes in modern power systems. Understanding the impacts and capabilities of the relatively new and uniquely positioned assets in grids with high integration levels of. Grid operators must balance the ups and downs of wind power with steady demand for electricity. Smart grid technologies and energy storage systems are helping to smooth out these fluctuations and make wind power more reliable. Wind energy has joined the energy mainstream, thanks in large part to the wind integration studies funded by the Wind Energy Technologies Office. In the 1980s, the electric power community considered wind energy a mere curiosity.
