

The casing at the bottom of the solar inverter

Overview

The inverter mount faces a specific direction. You will notice four metal tabs sticking out from the bracket. The bracket is 19 & 3/8 inches long and 9 & 15/16 inches wide. For mounting requirements based on wall type, refer to Appendix A: Mounting Details. Make sure that the inverter ON/OFF switch at the bottom of the inverter is switched OFF before and during the installation, and that the AC circuit breaker is OFF. The AC cabling is protected by a fast-acting current limiter in case of a short circuit and an overload. This instruction only provides an overview of the installation of the above-mentioned inverters. Due to product version upgrades or other reasons, this guidance will be updated irregularly.
