

What to do if photovoltaic panels are seriously degraded

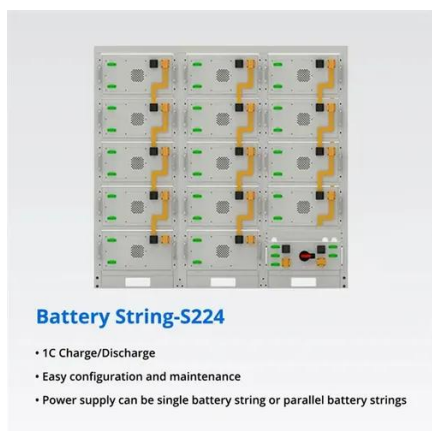

Overview

Some owners try using duct tape and sealant to slow the process down, but such a panel isn't going to last long. Having trouble with solar panels?

Fill out form and compare offers from solar. Solar panel degradation comprises a series of mechanisms through which a PV module degrades and reduces its efficiency year after year. However, like any manufactured product, solar panels can fail or underperform due to faulty materials or poor workmanship during the manufacturing process. One of solar energy's big pros is the longevity of the components. If you notice any issues with your system, take quick action to prevent them from getting worse. Degradation is a natural process.
