

Where to get approval for solar power grid connection

Overview

Before you go solar, you'll need to file for a permit approving your project. Solar permits typically require approval on two forms—one from your local building authority (to approve new construction), the other from your electric company (to approve interconnection to the grid). Professional Installation is Critical: Grid-tied solar systems require licensed electricians and multiple permits, with the interconnection process typically taking 2-8 weeks and costing \$200-\$2,000 in fees alone. Load-Side Connection Dominates Residential Installations: The 120% rule limits total. Commercial solar interconnection is the process of connecting solar power systems to the electrical grid to receive utility compensation for generated electricity. This critical phase determines project success, with proper management keeping installations on schedule and within budget.
