

Will large wind turbines turn without wind

Overview

Wind turbines only require a small amount of wind for the blades to turn and electricity to be generated, and they can gather enough momentum to continue spinning even after the wind stops, per the Office of Energy Efficiency & Renewable Energy. It could be just slightly windy; it only takes a slight breeze of to turn a turbine. They could also be drawing power from the grid to rotate the blades during cold periods of the. Hybrid wind turbines like SmartGen's can generate power even without wind. Bladeless wind turbines are an innovative, efficient and less invasive solution. This article will explain how this is possible using innovative ideas and. Utility-scale wind turbines have wind detection systems in-built in them to detect the direction of the wind and turn their faces so that the blades are in the right position to harness the full strength of the wind.
