

# Wind cannon test whether the generator can generate electricity

## Overview

---

Build a wind turbine and test different blade designs to generate electricity. This activity runs entirely in a Web browser. The operator proudly claims it uses "wind power," and suddenly you're wondering - why aren't these things generating electricity?

Let's cut through the confusion surrounding pneumatic wind cannons and their surprising lack of kilowatt-producing capabilities. Picture this: you're at a county fair. Using wind cannon to turn the generator blades, the combined force will make the blades turn fast. As the blade turns, the rotor attached to it also turns. This movement is transmitted through a series of cogs in a gearbox to turn the rotor of the generator well as reduce raw material volume and. Wind turbines work on a simple principle: instead of using electricity to make wind—like a fan—wind turbines use wind to make electricity. Wind flows over the blades creating lift (similar to the effect on airplane wings), which causes the blades to turn.
