

Wind turbine power generation drops

Overview

electricity generation from wind turbines decreased for the first time since the mid-1990s in 2023 despite the addition of 6.2 gigawatts (GW) of new wind capacity last year. Data from our Power Plant Operations Report show that U.S. windmill capacity is increasing due to subsidies and state mandates, but wind power production is declining, meaning consumers are paying more for less power. This slump is the result of weak winds, and it comes despite the continued buildout of wind turbines nationally. In 2023, the total amount of power U.S.

Wind turbine power generation drops

[US wind power generation falls for the first time since 1990s](#)

US electricity generation from wind turbines decreased for the first time since the mid-1990s in 2023 despite 6.2GW of wind capacity being installed in the past year, according to data ...

[Wind Output Falls to a 33-Month Low in July](#)

Despite the installation of more and more wind turbines, wind production declined in July to a 33-month low. Wind production also declined in 2023 from the year before despite 7 gigawatts of ...

[Predictably, Nova Scotia's wind turbine energy drops in weekend cold](#)

When the mercury plummeted over the weekend and Nova Scotians needed electricity the most, wind generation dropped out.

US wind power drops for first time in 25 years as turbine-hating Trump

US utility-scale wind energy generation declined in 2023 for the first time in 25 years, giving critics such as former president Donald Trump fresh ammunition to target the sector as an unreliable electricity ...

[America's Wind Power Production Drops for the First Time in 25 Years](#)

US wind power slipped last year for the first time in a quarter-century due to weaker-than-normal Midwest breezes, underscoring the challenge of integrating volatile renewable energy ...

[DOE Releases New Reports Highlighting Record](#)

The U.S. Department of Energy today released three reports showing record growth in land-based wind energy, significant expansion of the pipeline for offshore wind projects, and ...

[US wind power falls to 33-month low, generators burn more natgas](#)

July 24 (Reuters) - The amount of electricity produced by wind farms in the U.S. fell to a 33-month low on Monday, forcing power generators to crank up natural-gas fired plants to keep air

[U.S. Saw Drop in Wind Generation Last Year](#)

For the first time since the 1990s, U.S. wind generation dropped last year, according to government figures. The slump is the result of weak winds, and it comes despite the continued ...
